

ANNUAL INSPECTIONS WASTEWATER DISPOSAL SYSTEMS

In compliance with State of Vermont Water Supply and Onsite Wastewater Disposal permits, wastewater disposal systems (WWDS) have to be inspected annually in the month of April. The inspection is completed in April during a period of high groundwater to show any infiltration into the system.

During the inspection all components of the WWDS, collection, treatment, and disposal, have to be evaluated and any deficiencies noted and recommendations made. A report is submitted to the regulatory agency for approval.

DG does Annual Inspections for a variety of clients throughout the State of Vermont.
