The State of Vermont Water Supply Division like other States is faced with ensuring that the thousand small public water systems comply with the numerous State and Federal regulations recently promulgated. These regulations include the requirements for evaluation reports, long range master plans, up to date Operation and Maintenance manuals and sinking funds for infrastructure replacement.

The Water Supply Division took a proactive approach to the problem and offered to complete the Evaluation Reports for systems making application at no cost to the water system. The response was overwhelming and about 100 systems applied for funding. The Water Supply Division split the State into four regions and received proposals from 18 engineering firms. Dufresne Group was selected to complete reports for about 40 community systems in the Northeast Section of the State.

Dufresne Group was subsequently selected to perform similar services for about 40 additional small public water systems for a second round of funding.

## INITIAL COMMUNITY REPORTS:

- Cady Pine Crest Mobile Home Park
- East Berkshire Water Co-op
- Passumpsuc Water System
