

# SAND HILL WATER STORAGE TANK

TOWN OF PETERBOROUGH, NEW HAMPSHIRE

*Former Steel Water Storage Tank*

*New Concrete Storage Tank in Place*

As part of the Water System Improvements projects during the summer of 2008, the Town of Peterborough, NH replaced a 725,000 gallon painted and welded steel water storage tank with a 750,000 gallon precast-prestressed concrete storage tank. Dufresne Group provided the engineering, specifications, and engineering services during construction for the project. The completion date for this project was August of 2009.

## KEY FEATURES:

- Water service to and from the existing tank had to be maintained throughout the project while the construction of the new tank was occurring.
- Cost of the new maintenance free tank was less costly than refurbishing the existing painted steel tank.
