

The Bennington Water System Master Plan is the first water system master plan for the Town of Bennington. The evaluation included hydraulic computer modeling to provide a comprehensive plan for future system improvements. The study included an analysis of the current water treatment practices and recommendations for compliance with future regulations. The plan specifically addresses Bennington's GIS goals and methods for achieving the objectives of developing GIS mapping and databases for all utilities. DG has completed these GIS-related tasks for the Bennington sewer system and will continue to advise and assist Bennington with GIS mapping of the water system components, including piping, valves, hydrants and water services.
